# Routes to tour in Germany

# The Rheingold Route

German roads will get you there - to the Rhine, say. where it flows deep in the valley and is at its most beautiful. Castles perched on top of what, at times, are steep cliffs are a reminder that even in the Middle Ages the Rhine was of great importance as a waterway. To this day barges chug up and down the river with their cargoes. For those who are in more of a hurry the going is faster on the autobahn that runs alongside the river. But from Koblenz to

Bingen you must take the Rheingold Route along the left bank and see twice as much of the landscape. Take the chairlift in Boppard and enjoy an even better view. Stay the night at Rheinfels Castle in . St Goar with its view of the Loreley Rock on the other side. And stroll round the romantic wine village of

fateful repercussions as long as the East retained its substantial advantage in conventional arms. It is hard to see how this advantage

could possibly be offset.

The Opposition would like to neutralise these problems by negotiation, including the target of a nuclear-free corridor in Central Europe jointly proposed by the Social Democrats and the East German ruling party, the SED.

Western governments in general, and not just Bonn, will hear nothing of this

The official view in Bonn is that the danger of a fresh "grey zone" in shorterrange nuclear missiles can be averted by striking a balance.

The aim is to reach agreement on identical ceilings for Nato and the Warsaw Pact at as low a level as possible.

In principle that would entitle Bonn to redress the balance if need be by stationing new short-range nuclear wea-

The very idea deeply shocks and upsets everyone, but for the time being it seems to be mere theory.

What Bonn has in mind is an agreement ensuring balance in this weapons category. Whether use is ever made of the entitlement to station weapons in this category is another matter entirely.

The Federal government's aim is a mixture of strict disarmament and residual nuclear deterrent. It would also like to end conventional inferiority.

The Bonn Opposition calls in contrast, as it did 30 years ago, for an immediate start to a nuclear-free zone in Europe, possibly to be extended at a later date to the entire continent,

The Social Democrats would prefer to eliminate the conventional imbalance not by supplementary arms expenditure but by disarmament talks.

With a general election only two Continued on page 3

#### WORLD AFFAIRS

# Mankind's little problem: a small-scale storm in a nuclear teacup

# SONNTAGERICATO

If t has been known for a long time that Israel has nuclear weapons. A senior Israeli officer admitted as much on 14 October 1973, during the Yom Kippur

Addressing a small group of foreign military observers and journalists including the writer, he left no doubt that his country would, if sufficiently threatened, use weapons "the effect of which has been known since Hiroshima and Nagasaki."

He made this point in Beersheba, not far from the Israeli nuclear comblex at Dimona.

Twice at private gatherings President Katzir of Israel later admitted that his country had nuclear weapons.

In accounts of the Yom Kippur War several Israeli authors have noted that at a critical stage of hostilities Israel had third states relay strong warnings to Egypt and Syria...

If they were to stage deliberate, large-scale air raids on Israeli cities such as Tel Aviv and Haifa, Israel would wreak "fearful retribution."

Self-censorship or Israeli military censorship, which is particularly strict on this point, has prevented the publication of such reports, based on serious sources, in Israel.

Yet there need be no doubt that they are basically true. Israel is a nuclear

Its immediate adversaries certainly assume it to be one, as was shown by the tactics to which Arab delegates resorted at the 30th general meeting of the International Atomic Energy Agency in Vienna last month.

In the wake of Chernobyl the safety of civilian power reactors was the principal issue discussed. One of the IAEA's main tasks, monitoring observation of the nuclear non-proliferation treaty, was relegated to a back-seat

This task consists of inspecting nonmilitary nuclear facilities in membercountries to make sure that non-nuclear powers do not set aside from the fuel cycle fissile material that could be used in nuclear warheads.

Arab states sought instead to commit all 113 IAEA member-countries to ending cooperation with Israel in nuclear science and technology.

This motion was shelved after strong Western reactions, but the aim of the Arab move is unchanged.

At the same time Islamic Arab memhers of the IAEA undermined, as they have done for years, all attempts to discuss other breaches of the non-proliferation treaty that are considered either a strong possibility or an established fact.

In such instances a trend is apparent. in the IAEA as in other international bodies, of which the former UN high commissioner for refugees, "Sadruddin Aga Khan, has volubly complained.

As one of the few international per-

sonalities who has voiced unmistakable views on the subject, he said for instance that intensive efforts to develop nuclear weapons were being undertaken in the Third World even though they might only be unpretentious little

"There is (in the Third World) a groundswell of thought," he said, "that the Bomb is dangerous and has a destabilising effect. But since others fail to question nuclear weapons, why should. Third World leaders abandon their ambitions to manufacture a Bomb of

Some such "groundswell of thought" seems to have prompted Pakistan Premier! Zulfikar Ali Bhutto in the 1970s

"There is a Hindu Bomb, a Jewish Bomb and a Christian Bomb. There' must be an Islamic Bomb too."

Bhutto has long been dead, but little detailed proof is needed to show that his ideas on an Islamic Bomb are still alive and well.

Debates on nuclear weapons in the Third World discuss almost without exception the potential for nuclear destruction of the known, established nuclear powers.

Analyses such as a spring 1985 report to the US State Department which make it clear that the consequences of nuclear hostilities between the superpowers and their pacts would be catastrophic for the Third World go virtually unheeded in public.

This outlook temptingly leads to the alarming view that possession of "small nuclear weapons" of one's own is entirely legitimate, not to say advisable, especially if regional adversaries show signs or are suspected of similar ambi-

Such views make it clear that the non-proliferation treaty has already been set aside in the mind's eve even though few countries are in a position to do so in practice and any idea of doing so is out of the question for most Third World states.

Yet it is a myth to assume that exceptional technology is needed to develop nuclear weapons.

As the Aga Khan put it: "The very commercial interest of Western firms keen to sell (non-military) nuclear installations all over the world makes it possible for there to be enough plutonium or uranium around from which to make a Bomb.

"Developing nuclear weapons of their own is a task many governments are capable of solving."

India proved the point for many Third World countries when, on 18 May 1974, it detonated a nuclear device of its own in the deserts of Rajas-

Delhi may have given repeated assurances that it was only a "non-military" detonation, but scientists (and IAEA officials) are sure that India has the potential to produce nuclear weapons, modest or otherwise, whenever it

The more alarming aspect in India's case is the rivalry between it and Pakistan. Bhutto's reference to the "Islamic Bomb" was due in part to suspicions that Israel aiready had nuclear weapons of its own and in part to rumours that India had similar ambitions.

Bhutto was ousted and executed, his policy was condemned. But his nuclear

For weeks the French Premier, M. Chirac, has made it clear that French hostages in Syrian-controlled Lebanon are more important to the French government than a united front against state terrorism.

Who can blame the French when even Washington has sought behind a smokescreen of strong words, to strike a bargain with Iran for the release of US hostages? 

Democracles set greater store by human life than by raison d'étât. That is their strength. It is also their weakness in fighting regimes that have no such scruples.

(Süddeutsche Zeilung, Munich, 12 November 1986)

course has been retained, as straight a a die, by his adversaries and succes

International experts are convinced Pakistan had long collected enough nuclear fuel to "produce at least a dozen nuclear weyapons in the next three to five years," as US Senator Alea Cranston put it in June 1984.

In 1979 President Carter froze IK economic and military aid to Pakistan because, he said. Pakistan planned to develop nuclear weapons.

After the Soviet invasion of Afghanistan US aid was resumed and substantially increased in 1981. Economic and military aid, in a ratio of about 1:1 will have totalled \$3.2bn between 1982 and 1987.

As in Senator Cranston's case in 1984 there could be domestic ressure for the latest Senate attempt, initially by the Democrats, to have US aid to Pakistan frozen again.

The argument for so doing is that Pakistan has even stepped up its nuclear arms programme. But independent, authoritative US scientists have rubbed their finger in the wound.

They refer to the capacity of the Kanupp power reactor near Karachi and, in particular, to the Cashma reactor, where uranium could be convened into plutonium.

The Cashma project has been declared top secret and out of bounds to external inspection and control.

Saint-Gobain, the French manufa turer, pulled out of the project under US pressure. But leading US expen Professor Harold Freeman says Pakis tan still has the blueprints.

Pakistan owes much of its know-how to nuclear physicist Abdul Qadar Khan, who spent three years working at a uranium enrichment plant in the

He disappeared with a large quantity of documents (for which he was convicted and sentenced in absentia by an Amsterdam court).

He is now officially employed at the Kahuta uranium enrichment plant is Pakistan — as its director.

Pakistan's official statements on nuclear armament are evasive. A vehement media attack by Pravda and Radio Moscow was dismissed more or less in passing, while Western criticism is practically ignored.

Other governments accused of developing nuclear weapons operate in much the same way. South Africa for instance has dismissed similar scorations as "laughable."

A June 1981 Nairobi declaration by the All-African Council of Churches on militarism and militarisation weat largely unnoticed elsewhere in Africa for that matter.

It drew the churches' attention to the nuclearisation of South Africa yet it little avail even though this passage it Continued on page 3

# SPD general-election hopes plummet after disasters in the Länder

The SPD's election defeats in Ham-L burg and Bavaria were so heavy that no one how seriously believes that it can win the general election in Janu-

There is simply not enough time to develop new, more appealing election strategies or to consider nominating a new candidate for chancellor to replace Johannes Rau.

Rau emerged victorious in the North Rhine-Westphalia Land election a year ago (he is Premier) but has been looking strangely pallid ever since.

Rau declared, against the instincts of a lot of doubters, that the SPD was going for an absolute majority in the general election. In all probability even Rau himself did not believe that this was a realistic aim. (Following the Hamburg election, the SPD has changed its mind.)

'Now it's too late for strategic adjustments. It is always difficult to get rid of a government when most voters feel con-

The increase in real incomes this year has been higher than at any time in the last ten years.

The Neue Heimat affair has been weighing heavily on the SPD. (The heavily-in-debt house-building and property group was sold to private interests for one mark. But it has now been sold back again for a mark following the refusal of bankers to release the trade-unions holding company from debte-runwap by Neue Heimatr-The entire affair has left a taste of union incompetence which has rubbed off on to the Social Democrats.)

The situation has changed for the Social Democrats since it became clear that the Greens were not just a will-o'the-wisp in German politics.

The Greens, however, still cannot be regarded as an established party. They had spectacular defeats in Saarland and North Rhine-Westphalia a year ago and looked for a while as if they were on the

Saarland's Premier Oskar Lafontaine and North Rhine-Westphalla's Premier Johannes Rau showed that an SPD policy catering for a broad spectrum of voters was able to persuade many potential Greens voters to vote for the SPD

For obvious reasons this approach doesn't work today.

First, the Greens are a party of protest. Their popularity reached its peak at the

Continued from page 2 the declaration was based on military intelligence:

The nuclear non-proliferation treaty has long been undermined in spirit. All over the world there has been a considerable increase in the capacity from which nuclear weapons could be developed.

It is no longer enough to refer only to a nuclear threat arising from hostilities between the established nuclear powers.

The use of "small-scale" nuclear devices in a Third World conflict that seemed a storm in a teacup when viewed from the outside could, in the short or long term, prove extremely dangerous for mankind. Fritz Schatten

(Doutsches Aligemeiner Sonntagsblatt; Hamburg, 16 November 1986)

height of the peace movement and antimissile deployment demonstrations and today coincides with the fears conjured up by the names Chernobyl, Cattenom and Wackersdorf.

Second, their recent election successes show that the party is strong when "nothing" is at stake.

Rau and Lafontaine were able to push the Greens to one side because the voters believed in and wanted an absolute majority for the SPD.

This was not the case in Hamburg and certainly not in Bavaria. Rau will have to face up to the same problem in January.

Doubts about an SPD general election victory may persuade many potential SPD voters to vote for the Greens. partly out of protest and partly to show the SPD that for many left-wing Social Democrats the idea of a Red-Green alliance in Bonn is not such a nightmare af-

In this sense, the situation of the Greens is mirror-inverted to that of the FDP. The Greens get more votes when very little seems to be at stake, whereas - as in Hamburg and Bavaria - the FPD then drops out of the running.

The FDP acts as a coalition-maker. whereas the Greens are still not accepted as a possible coalition partner either because they don't want to be or because they are not wanted.

The SPD met its Waterloo in the

Hamburg election. Most people ex-

pected it would lose its absolute major-

ity, but few thought it would drop 10

percentage points of the vote and finish

up with only 41.8 per cent of the vote.

behind the CDU (which increased its

vote from 38.6 per cent in 1982 to 41.9

power in the city for about 30 years.

able voters can be.

to resign.

This is the SPD's dilemma. As SPD left-wingers quite rightly point out the party only stands a chance of taking over government power in the near future if it sets its sights on an alliance with the Greens.

For as long as the Greens are represented in the Bundestag there will be no left-wing majority without them.

However, a decision to move towards the Greens also involves risks for the

A joining of forces with the Greens would mean that a clear dissociation from this party, as in Saarland and North Rhine-Westphalia, would no longer seem plausible.

As a result the SPD would not be able to claim that it is the sole representative of left-wing beliefs.

An acceptance of the Greens by the SPD just to secure majorities would allow the Greens to benefit from the "FDP effect".

People would vote for the Greens when political majorities are at stake. A further critical aspect of a Red-Green alliance would be a shift of em-

phasis within the SPD from the political centre to the left. An alliance with the Greens would require concessions in the fields of en-

of the SPD. The SPD would probably also have to alter its security policy course, making Bonn an outsider in the western world. What looks like turning into a long-

ergy, environmental and economic poli-

cies, concessions which might scare off

the more middle-of-the-road supporters

problem for Shadow Chancellor Rau. He has got to soak up votes from the Greens, but in focusing on the main

election issues discussed by the Greens he strengthens their position. He basically agrees with their com-

term dilemma for the SPD is already a

plaints, but is unable to keep pace with uncompromising ecological

On the other hand, Rau needs votes from the political centre, which mistrusts the slogans of SPD left-wingers and the SPD's talk of a phaseout of nuclear energy.

A majority is not in sight.

It's too late to take the necessary steps to change this situation.

A sudden declaration of support for Red-Green collaboration would make Rau look completely implausible.

What is more, at the moment a Rcd-Green majority probably doesn't exist Thomas Löffelholz

(Stuttgarter Zeitung, 13 November, 1986)

#### Defence ideas

months away profound deliberation is an unlikely immediate prospect. But a thorough reappraisal of security policy

This policy review would best be undertaken in conjunction with Britain and France. Europe's views can only carry weight if they more or less tally from one country to the next. But agreement will not be easy to

powers and reacted accordingly, with shock and doubt, to Reykjavik. They set great - arguably too great tore by the Federal Republic's conven-

reach. Britain and France are nuclear

tional defence strength. (Die Zeit, Hamburg, 14 November 1986)

# Why Hamburg turned on its favourite party

During the past four years, Hamburg live in houses built by the Neue Heimat

The conservative and liberal parties had clear gains. There has been a definite swing to the right in the city which is traditionally left-wing.

There was also a surprisingly large increase in the vote for the Green-Altern-

For the first time this party had a twodigit share of the vote, yet another sensational aspect of the Hamburg elec-

The fact that all its candidates for the city parliament were women (led by Christina Kukielka) is undoubtedly one reason for this success.

"Hamburg encirclement" of demonstrators also induced many former SPD. supporters to vote for the Green-Alternative party.

The SPD is the victim of a tremendous polarisation in the city. ...

An extremely problematic situation has resulted for the Social Democrats and the city of Hamburg itself.

Once again the Hamburg elections have led to a stalemate situation.

Which party should govern the city? The SPD in a minority government tol-

erated by the CDU, the SPD and CDU in a Grand Coalition or the SPD (or eyen the CDU?) in a coalition with the Greens?

If the SPD decides to form a coalition with the Greens it would go back on its promise (as it did in Hesse) and leave the SPD at federal level with a lot of explaining to do.

A Grand Coalition with the CDU. however, would undoubtedly strengthen the position of the Greens in Hamburg as a reservoir for left-wing opposi-

The only other alternative, apart from new elections of course, is a minority SPD government. But how long can that

Understandably, the SPD's candidate for chancellorship in Bonn, Johannes Rau, didn't want the Hamburg elections to be regarded as a test election for

Nevertheless the result of the state elections in Lower Saxony in the summer, the disastrous election result in Bavaria and the bitter defeat in Hamburg The problems the SPD Senate had in make one thing clear: it's uphill all the dealing with the affair surrounding the" way for the SPD in its struggle for power

The Social Democrats are bound to have been disheartened by the election result in Hamburg and a

How:can Johannes: Rau now seriously talk of an absolute majority for the SPD or even an election victory on 25 January without running the risk of being ridiculed by the voters?

It almost looks as if the general election in January is already all over bar the shouting. Jürgen Offenbach

(Stuttgarter Nachrichten, 10 November 1986)

# Genetic technology aids germ warfare research in spite of treaty

Signatories to the Geneva Protocol of 1925 agreed never to use biological and chemical weapons because of the terrible damage they can inflict.

In 1975 an international convention outlawing biological and toxic weapons came into effect. Up to the end of 1985 this convention had been signed by 103

This convention made it illegal to develop, produce and stockpile biological

The ban, however, only covered types and quantities of germ weapons "that were not produced for prophylactic, protective and other peaceful pur-

These exceptions were the convention's weak point. Pathogenic agents. which make biological wenpons possible, could be used in research into protective measures. It followed then that! research into defence against germ warfare was permitted under the conven-

Thus genetic technology made an appearance into biological weapon research. Peace researcher Alfred Mechtersheimer said: "Genetic technology made the use of biological weapons that much more interesting."

Previously the attacker was concerned that he himself could be infected by the pathogenic agent used as a weapon, but today vaccines, produced with the aid of genetic technology, give pro-

tection against such an eventuality. Genetic technology takes care of "re-

Until the end of the 1960s bacteria were presumably produced for biological weapons, but today viruses take

Scientists engaged in military research see in them one decisive advantage over bacteria; there is no specific therapy against virus infections.

The micro-organisms themselves and their poisonous by-products, toxins, are of interest for producing germ warfare weapons. Some of them, the tetanus toxin for instance, are far more poisonous than the dioxin that contaminated the Italian town of Seveso.

These highly effective substances can be investigated far more easily, using new bio-technological methods.

Nevertheless biological weapons have become a dreadful threat since the introduction of genetic technology.

Erhard Geissler of the Science Academy in East Germany said: "The advances made in biological weapons should not be quoted as an argument against genetic technology."

Together with the Stockholm-based

Peace Research Institute he has recently published a book entitled "Biological and Toxic Weapons Today."

The first use of biological weapons in 1347 led to one of the greatest catastrophes that has ever afflicted Man.

Tartars were besieging Kaffa, founded by Genoan merchants in the Crimea as a trading post. The merchants fought the Tartars, it is believed, for three years, then plague broke out among the besiegers. The country from which the Tartars came was one of the few areas infected by the plague.

The Tartars decided upon an act of desperation. They catapulted their warriors' corpses over the walls of the Gen-

The plague swiftly spread among the talians. In panic the surviving merchants boarded their ships and made for Genoa.

From there the plague, known as the Black Death, spread throughout Europe, claiming an estimated 25 million ives within five years. This represented between a quarter to a third of the European population.

Fortunately research by British scientists into biological weapons on the island of Gruinard off the west coast of Scotland in 1941 and 1942 did not reach plague proportions. The British scientists dropped a small bomb there containing an anthrax bacillus.

Thirty-seven years later, in 1979, scientists found traces of this pathogen ic agent on the uninhabited island. This year the British have cleaned up the last traces of this contamination.

The director of the British institute for chemical warfare defence, Mr Watson, said in a BBC interview that the experience with Gruinard showed that biological war would make Aachen, Berlin, Frankfurt, Hamburg, Stuttgart and Wilhelmshaven uninhabitable.

Over the past few years viruses have featured more and more in lists of possible biological weapons. Many of the new viruses cause haemorrhagic fever. an illness whose symptoms are bleeding and fever.

Many of these viruses have only recently been discovered. The Lassa virus was found for the first time in northern Nigeria in 1969.

The Ebola virus was found in southern Sudan and northern Zaire in 1976. Fifty per cent of people infected by

Pathogenes of well-known illnesses such as yellow fever, smallpox and hepatitis A have been known for some time.

In the past working with viruses, that are highly infectious, was very dangerous, so that many of them were not developed for use as biological wea-

Now, using genetic technology methods, the genotype of the virus can be employed in safe bacteria, making the research that much more simple.

There are two reasons why viruses are preferred for biological weapons. First, there is no specific therapy against virus infection; and second, the symptoms of virus infection are so ill-defined that it is difficult to differentiate them

from the symptoms of other lilnesses. .. This is particularly: true of viruses that cause meningitis and haemorrhagic fever. It follows then that it is difficult to

prove that biological weapons ha been deployed.

23 November 1986 - No. 1252

Today it is relatively easy to make bacteria resistant to antibiotics into which resistant genes have been in planted. This means that typhus, that can normally be treated by anti-biotics would be lethal.

Modern biology can, construct pa thogenic agents on the drawing-board. A case in point is genetic changes made to the vaccina virus, the virus ad-

ministered as a smallpox inoculation, Genetic information can be built into the virus's genotype from three other viral types simultaneously. These experi-

ments aid the production of vaccines. It is also technically possible to in plant genes, that produce highly toxis poisons, into vaccine viruses.

Erhard Geissler writes in his book that "A very efficient biological weapon would be a smallpox virus with a poisonous gene, since mass inoculation against smallpox is no longer undertaken."

Military scientists have been more and more interested in the poisons themselves in the past few years. In contrast to bacteria and viruses they have the military advantage that they take effect more quickly and do not breed out of control.

The military regard them as chemical weapons, since they are often more poisonous and can exterminate people using much smaller quantities.

In the Stockholm Peace Research institute book it is estimated that about 20 toxins are on the possible weapons' list.

The tetanus toxin, for instance, is one of them, made from the tetanus pathogene. Less than a millionth of a gram can kill a person. About five kilograms would annihilate the population of the

There is nothing quite so poissons botulin, produced from the bacteria clostridium botulinum. Botulism is known as sausage-poisoning or poisoning from tinned food affected by the botulinus bacteria.

When the genetic code of a toxic gene has been decoded - today a routine matter — it is possible to produce this gene, if it is not too large, synthetically.

Toxins that include little amino acid, the basis of albumin, can be produced synthetically in the laboratory.

Because toxins can be packed away in the smallest of micro-capsules, they can be easily sprayed into the air by the colloidal system, acrosol...

People would hardly notice that the poison was being used.

Biological weapons have not only become more frightful in the past fer years, but the likelihood that one by they would be used has become more real because attacking troops can now be protected by new vaccines.

Countries, that have signed the convention outlawing blological and toxic weapons, are pressing ahead with research into defence against vaccines that could possibly be produced as biological and toxic weapons.

.There are already vaccines against a number of possible biological weapons such as anthrax, plague and Rift Valley fever. Efforts are being made to find protection against other viruses and toxins,

Harlee Strauss and Jonathan King o the Massachusetts Institute of Technology doubt that the development of yet cines against potential blological.

areas are just one aspect.

Differences of opinion still exist, however, with regard to longer-term prospects, export earnings stabilisation and whether priority should be given to greater industrialisation (with widespread trickle-down effects) or to rural development policies (an approach supported by the Commission).

Food aid is also a controversial issue. Critics claim that food aid disrupts regional production structures, changes consumer habits in an alarming way, and creates new dependencies.

Discussions at the symposium in Malente stressed that structural and longterm deficiencies make the provision of aid in this form essential and meaningful. How will the Community's southward enlargement affect these problems?

As the president of Deutsches Insitut für Wirtschaftsforschung, Professor Krupp, pointed out in Malente the Community's structure will change when new countries join it.

In-the already extended Community of Twelve, for example, the agricultural sector is no longer an area of secondary importance which can be financed by a flourishing industrial sector.

Its growing significance will be accompanied by new competitive problems in the Mediterranean region.

The competitive position of countries not belonging to the European Community will also deteriorate in terms of sales prospects for farm products in the Community.

#### SuddeutscheZeitung

and the second of the second of the second

jective of setting up an internal market

Before this can be done a variety of obstacles to the movement of trade, services and capital as well as to the freedom of establishment for private individuals and businesses must be eliminated.

Experts disagree over whether the whole host of national stipulations should be aligned - an undoubtedly time-consuming and highly bureaucratprocedure - or whether it would be petter to try and enforce the provisions in the Treaty of Rome relating to competition more effectively.

The latter view was adopted in Malente by the spokesman of the Kiel Institut für Weltwirtschaft, who even recommended that the Commission should legal action against the Council of Ministers, i.e. the national governments of member states, via the European Court of Justice in matters relating to competition and the prevention of subsidisation.

After the semi-euphoria of the 1960s and the crises of the 1970s the Community now seems to be ready to make a new start.

Financial problems only cast doubts on the means and not on the objectives of Community efforts. Volker Worl (Süddeutsche Zeltung, Munich, 31 October 1986)

#### common financial market or solve basic **OECD** celebrates 25 years of aid and discussion

The Organisation for Economic Cooperation and Development was formed 25 years ago. This article written for Hannoversche Allgemeine, looks at the organisation's latest meeting and what it has achieved.

special conference on the chal-A lenges of the international economy marked the 25th anniversary of the Organisation for Economic Cooperation and Development (OECD).

The former French head of government, Raymond Barre, the Danish foreign minister, Uffe Ellemann-Jensen, his Uruguayan colleague in office, Enrique Iglesias, state secretary in the Bonn Finance Ministry, Hans Tietmeyer, and the head of Volkswagen, Carl Hahn, were just some of the roughly two dozen politicians, government officials, professors, managers and journalists from OECD member countries who attended the conference.

The discussion centred on the opportunities and risks facing the world economy as well as on new technologies.

Over the years the OECD has stuck to its guiding motto. As OECD secretary-general Jean-Claude Paye reiterated, the OECD is not a supranational organisation, but a forum for countries to discuss economic issues of mutual

Member country governments have the opportunity to compare their positions and exchange views.

The origins of the organisation go back to the Marshall Plan, when the Organisation for European Economic Cooperation (OEEC) was set up to organise Europe's recovery.

The OEEC had the job of allocating \$14bn worth of economic and financial aid and coordinating collaboration between the recipient European coun-

This money, for example, helped the Federal Republic of Germany finance what was to be later known as its Wirtschaftswunder (economic miracle).

Once the aid had been distributed the OEEC's task was completed.

In order to ensure that the organisation's intentions did not simply pale into insignificance 18 European countries (to begin with) plus Canada and the USA drew up the OECD conven-

The inclusion of the word "Development" in the organisation's new name underlines the importance attached to close cooperation with developing countries by the industrialised coun-

Other countries have joined the organisation since 1961.

Japan was the first country from the Pacific region to become a member in

Finland, Australia and New Zealand western world as full members.

A review of the achievements of the OECD, which brings together the foreign, finance and trade ministers of member states once a year, reveals a clear shift in economic policy priorities over the years.

During the 1960s, from today's standpoint a decade of prosperity, economic policy efforts concentrated on balanced economic growth and the stabilisation of overall demand in a situation of full employment.

At the beginning of the 1970s greater emphasis was placed on inflationary problems.

The sytem of fixed exchange rates collapsed, Since the oil-price shock in 1973 the OECD increasingly assumed the function of a crisis management in-

In the energy sector the International Energy Agency (IEA) was set up, but France refused to become a member.

Supported by the OECD secretariat with its staff of 1,710 employees ministers discussed ways of overcoming the

A primary objective was to prevent the crisis from triggering a trade war.

A trade policy standstill agreement vas agreed upon at an early stage.

As unemployment grew in the second half of the 1970s more and more analyses were conducted on the labour market situation.

More recently, the OECD has voiced its support for structural adjustments, effective capital markets and a tightening of public spending.

What does the organisation feel about the economic situation today? The OECD's forecasts have the rep-

utation of being cautious rather than There was a certain amount of discernible optimism, however, during the

organisation's "birthday conference". Most conference delegates did not feel that there is a real risk of worldwide deflation, since worldwide demand is still substantial and the product

range is constantly being changed by technological revolutions. The conference did not rule out crises, particularly in the field of trade

One French delegate, however, was convinced that international collabora-

tion would help overcome such crises. Raymond Barre expressed his concern about the marked transformation of financial markets into what he re-

ferred to as gambling casinos. At the same time the conference showed that economic policies are less dogmatic and self-opinionated than a

peris on the western side who feel that such a framework agreement would significantly foster peaceful coexist-ence, as if relations of this kind had not existed between the European Community and Comecon for many years,

These experts also imply that it is in e West's interest to promote supranational tendencies in the Eastern bloc.

There is hardly any discernible connection between the Soviet Union's behaviour towards the European Community and its, behaviour towards the IMF. ... open to the water of the

... Until the Soviet Union wishes to raise Western loans on a regular basis it is unlikely to be interested in joining the IMF 

In such an eventuality, it would then be interesting to see what kind of controls mechanisms the Fund would devel op for the Soviet Union.

Of those Communist countries in Europe: which are already IMF members Hungary, despite its relatively high debt level of roughly \$10bn, does not present serious problems, since it has successful debt:management.

In Poland's case (debts of S20bn) cooperation has yet to prove its worth.

and in interest rates have generally improved the position of debtor countries.

Rumania has caused the IMF several headaches and many members would prefer to see it leave.

1984 Rumanian leader Nicolae Ceausescu ended all cooperation with the IMF over efforts to solve its debt problems, refused a stand-by credit, the acceptance of which generally indicates that the country in question is following IMP recommendations, and stated that n future he wants to pay back his debts the way he wants to:

Rumania's stance could have had dis-

astrous effects on the IMF if other countries had decided to take similar action. The Fund's prestige would have Fortunately, at least for the IMF, the Ceausescu experiment ended with a ca-

tastrophe and loday serves as a deter-'Ceausescu's exaggerated export drive policy drained the country of its econ-

omic resources and demoralised the Imports cuts, on the other hand, put an end to any noticeable technological

and ecohomic progress. Rumania today still has about \$6.6bn worth of debt to pay back."

Its export capacity to the West has diminished and its liabilities vis-à-vis the Soviet Union are increasing.

There is a growing suspicion in the IMF that the statistical data provided by Rumania are unreliable.

This case, it feels, is one reason why despite in some cases enormous debt burdens no Third World country has decided to simply refuse to pay its debts, a course of action frequently recommended by Cuba, for example.

The last non-aligned summit in Harare did not support such an approach, and Peru, which wants to make its debt repayments dependent on its export earnings, stands, at least according to the IMF, alone.

Yugoslavia is a special case, Its econ-

# New age of ceramics as an industrial superstuff

Mude-to-measure materials devised by industrial chemists for industrial use have astounding claims made for theni. In theory, there is an unlimited number of synthetic materials which can be made to do the job in any given situation. They can be devised to withstand, the toughest strains in outer space or to replace blood vessels in the human, body. High-performance composite materials are used in the manufacture of tennis rackets and flat springs for vehicle suspension units. Ceramic materials are making a comeback in electronics and the motor industry.

t the 1984 Hanover Fair the Japa-A nese carmaker Isuzu unveiled a dicsel engine made entirely of ceramic material. Claims of a break- through were probably premature; the engine has yet to leave the testbed.

At this year's Hanover Fair, Volkswagen spokesmen said that the technology for such an engine was not yet advanced enough. Yet Volkswagen is working with the material for other components such as the piston cap of a turbo diesel and the rotor of a turbo supercharger.

These are two ceramic components so far developed but not, as yet, to the point at which they can be used as standard parts.

Work is in progress on developing ceramic cylinder head plates, cylinder rings, valve and piston bases and diesel combustion chambers.

There are sound reasons why carmakers are so keen on the new material. Ceramic materials are available in virtually unlimited quantity. They maintain constant temperatures. They are effective heat insulators and resistant to wear and tear.

They are also corrosion-resistant and light in weight, Volkswagen research staff enthuse, as well they might. These are all qualities in demand in engine construction and design.

The new generation of ceramic materials have little or nothing in common with traditional, natural products based ол clay or kaolin.

"Modern high-performance ceramics are based on extremely pure oxides, nitrides, carbides and borldes," says the chemical industry research fund. "They come in a precisely defined composition and particle shape and are compressed and sintered into compact form."

Carmakers are by no means alone in experimenting with the new materials.

Other industries swear by them too.

Computers would be virtually unable to compute without ceramics. As "miniature power stations," to quote Jürgen Bednarz of Siemens, they would break down in the heat wave were it not for ceramic components.

Ceramic parts help to purify effluent in bio-reactors, while - more mundanely -- ceramic hobs are a popular feature in modern kitchens.

"Countries or companies unable to process high-performance ceramics in the 1990s in the same way as they process plastics or metals today will find it very hard to hold their own against high-tech. competition," / says . Günter Petzow.

Professor Petzow works at the Max

Planck Metal Research Institute in Stuttgart.

The message has long been heard and heeded. Leading firms are in the running, with Hoechst in Frankfurt having joined the pack leaders in Germany. Last year they bought into Rosenthal

Technik, a subsidiary of the well-known china manufacturers. Now known as CeramTec, it is a wholly-owned Hoechst subsidiary." The Frankfurt chemicals giant seems

likely to have invested over DM100m in the new company. Technical ceramics still play a minor role, however. Company turnover at roughly DM231m accounts for a mere 0.5 per cent of Hoechst world turnover.

But the parent company is sure a great future lies ahead for its infant subsidiary, Hoechst has invested DM64m BASF, the largest n CeramTec this year alone.

Feldmühle is still the pack leader in Germany. Formerly a member of the Flick Group, Feldmühle claims to lead the field in industrial ceramics. Turnover in this sector totalled DM300m last year. Products ranged from mechanical engineering parts to artificial

#### **BUSINESS**

# Hoechst heads list of Euro takeover raids in USA

uropean companies' buying spree in America is causing alarm, according to American economics weekly Bu-

The magazine recently wrote: "The urge in Europe to buy in America is irresistible, from multinationals such as ter technology organisation for the British Petroleum to small companies such as Sweden's Pharmacia."

The purchases are not small. They involve whole corporations. For instance, the leading French industrial gases group L'Air Liquide paid a billion dollars for the Big Three Industries, Sweden's Eletrolux shelled out \$750m for White Consolidated Industries, and British Petroleum paid \$500m for Purina Mills.

The magazine, shocked at these raids on US corporations, commented that a new kind of dare-devil capitalism was the fashion in Europe today.

West Germany was one of the leading addicts for this kind of commercial adverturing, Business Week maintained.

Early this year Siemens bought up GTE Telecommunications for \$420m. Just a few weeks ago Bertelsmann hit the headlines when it acquired America's second largest publishing house, Doubleday, for \$475m. This made Bertelsmann the largest media group in the world.

But all this is small beer compared to this week's announcement that Frankfurt-based Hoechst is bidding for the New York chemicals giant. Celanese, for something like DM5.9bn, the most costly take-over in the Federal Republic's history.

Wolfgang Hilger has been chairman of the Hoechst executive board for the past six months. Before any false impressions could be formed he hastened to assure the business community that this is, as the Americans say, "a friendly take-over," actively supported by Celanese management.

Hilger said that in American terms the purchase price was nothing unusual. It was ten per cent over the stock exchange quotation.

If Hoechst had taken action earlier a lot of money could have been saved, even taking into consideration the current favourable dollar-deutschemark exchange rate.

In 1984 Celanese shares struggled to maintain a \$70 level. Last year they were valued at \$150, now they are quot-

Hoechst has no problems financing this super-deal. The organisation's "war chest" is well stocked.

At the end of 1985 the balance showed liquid funds totalling DM1.2bn. To that can be added a capital increase of DM883m early this year, and, according to Hilger, there are the profits from current business.

Hoechst has, then, to hand 40 per cent of the purchase price without endangering in any way the company's

The remaining 60 per cent of the purchase price will be raised by Hocchst's America subsidiary on the US capital market.

The executives of other chemicals groups acknowledge with envy that the Hoechst deal is an unprecedented show

Hocchst was in a tight spot striving to find a stronger position on the American market. Other West German chemicals groups had already improved their ant sales market and an interesting

position on this market. In 1978 Bayer purchased the chemicals giant 'Miles, that at that time had sales of a billion

Four years later Bayer acquired the Compugraphic Corporation, a compuprinting industry.

Last year BASF purchased from Celanese a division handling high-quality synthetics for \$420m.

Among BASF's other purchases was the coloured printing ink manufacturer Inmont that also had sales of a billion dollars a year. But parallel to this acquisition in America Hoechst had to close down substantial synthetics production capacities. The American Hoechst Corporation could suddenly no longer keep pace with Bayer and BASF. Profits fell to \$5.7m last year. The corporation was only able to remain in the black with dif-

Even if profits can be sustained in 1986, sales are only likely to increase a modest 5.1 per cent to \$1.76bn. Bayer and BASF expect sales in America of \$4.5bn each.

The danger for Hoechst is that it will for ever be in third place among the three dye manufacturers.

Things have now changed. Assuming Celanese is included in the group's 1986 international balance sheet, should Hoechst have sales of over \$5bn in America, Hoechst would then unexpectedly be in the top place among its est German competitors.

Hoechst would also overtake the other two in worldwide business. There are those even who say that Hoechst will return to top place among Europe's chemicals manufacturers.

BASF was top last year with a turnover of DM47.7bn, Bayer second with

DM45.9bn, and Hoechst in third place with sales of DM42.7bn.

Including the seven billion marks from Celanese Hilger will have achieved a sales figure of over DM50bn.

Hoechst reasons for getting so deeply involved in the American market are the same as those of most companies that extend themselves across the Atlantic.

Wolfgang Hilger said: "The US is the largest closed market for chemicals in the world. But the US market has not had this significance for Hoechst until now."

Siemens boss Karlheinz Kaske spoke in the same way of America's electrical engineering and telecommunications market, and the head of Bertelsmann, Mark Wössner, said the same of the American media market.

German businessmen are united on another point concerning the American market. It is the most demanding in the world and in many areas of a leader in technical progress. . . .

drawer know-how for technical fibres and first-class performance material.

Bernd Kitterer; a foreign trade expert with the German Federation of Trade and Industry, confirmed that West German interest revolved round an import-

Hoschst's Wolfgang Hilger . . . 'I come as a friend',

country for investment. In 1985 West German investors placed DM13.6bn abroad of which DM7.7bn went to America. Involvement in America has been continuously increasing over the past few years. West German investment in the United States in 1983 was DM22.7bn, in 1984 it rose to DM3.2bn.

Kitterer does not regard this as dramatc or unusual in any way. On the contrary ne regards this as a normalisation process. In his view the Germans are late-comers to investment in America.

German investment abroad, in comparison with that of other industrialised countries, is limited. The consequences of the last war is one of the reasons for

Broadly speaking the weak dollar is not the reason, so often given, for the current high level of German investment in America, according to Kitterer.

Involvement of this kind requires too extensive a period of preparation to be linked to exchange rate fluctuations.

Much more important is a reason that is little spoken of: the threat or danger of American protectionism.

European companies are establishing production capacities on the spot in the event that one day customs and import barriers exclude them from the American market, only opened up with difficulty. This will enable them to continue their involvement in the American market through "domestic production."

Buying up corporations, a spectacular feature of this year, is in fact an exceptional approach.

A study produced by the German-American chamber of commerce and consultants Arthur Young International shows that of the 2,000 German companies active in America only 21 per cent came into German ownership through purchase. (They employ, by the way, 400,000.)

The study showed that 73 per cent of these companies were newly established operations and six per cent were joint

entures with American partners. :. The survey showed also that not all expectations were fulfilled in the land of boundless opportunity.

Thirty-six per cent of the companies questioned showed profits less than had been hoped for. Seven per cent revealed

It has yet to be seen whether Hoechst, Bertelsmann or Siemens will be members of this group, or members of the group that show fat profits of between Hoechst, for Instance, with the acquire 25 and 49 per cent on the organisation's sition of Celanese gets access to top- basic capital (as 16 per cent of those questioned in the survey claimed)..

One thing is certain: even in America. there is a limit to everything with growth rates of between 2.5 to three per cent:

Th. Mönch-Tegeder/B. Salchow (Rheinischer Merkur/Christ und Welt, Bonn, 7-November 1986):

# Media giant sits TRANSPORT back and waits for the music

#### Frankfurter **Neue Presse**

edia giant Bertelsmann is taking Va breather after its two take-over coups in America.

Executive board chairman Mark Wössner said that the acquisition of the music and recording activities of RCA and Doubleday, America's second largest publishing house, had given Bertelsmann indigestion.

The massive increase in growth with international sales jumping up from the previous DM7.6bn to DM10.2bn has temporarily strained the group's financial resources.

The imposing \$850m that Bertelsmann will invest in RCA and Doubleday, is responsible for this.

Bertelsmann has paid less than \$500m for Doubleday for certain and a half of this sum can be found from liquid funds. Bertelsmann has a liquidity of DM800m.

If there are no other spectacular acquisitions, Bertelsmann's expansion is ogressing at a modest pace.

In the group's investment plans totalling about DM900m for financial years 1986/1987 and 1987/1988, sp DM400m has been carmarked for expansion.

The group's most promising fieldier future is in the electronic media Wössner has set his sights on a breskthrough next year, particuarly through participation in commercial television (cable television RTL plus and Radio ower Saxony).

The group's main activities are now centred on the American media market. This will be consolidated when the take-over of the American companies is completed in December.

Then a third of sales will be achieved in North America - 40 per cent in West Germany and 28 per cent in the rest of Europe.

For Wössner the dual deal in the US, that increases business scope from DM1.5bn to over three billion, is of considerable strategic significance.

Management functions will have to adjust to this new emphasis. The group expertise will be more strongly concentrated towards America.

Wössner has already sent his thief ideas-man and strategist Dornemann to New York. Walter Gerstgrasser has to make the Doubleday book clubs, whose profits are poor, toe the line.

According to Wössner there is no division in the Bertelsmann empire that is giving any cause for anxiety at present.

First figures for the financial year just ended show the "splendid condition" the Bertelsmann group is in, according to financial director Holl;

. Unfavourable exchange rates are responsible for the sales increase of only: 2.2 per cent rather than two digits.

The year's profits were DM325m. For the next three years the group promises a 15 per cent dividend on funds invested in the group. (Frankfurter Neue Presse, 6 November 1986)

No. 1252 - 23 November 1986

# Tests with two-engined buses in city traffic show big fuel savings

7est Berlin experiments in which buses have been fitted with two small diesel engines instead of a larger one have shown fuel savings of between 16 and 20 per cent.

The principle is that in the stop-go of heavy city traffic, the larger engine is not used at optimum power. A smaller engine is more economical.

The idea was drawn up at a research institute in which Volkswagen, bus manufacturers Auwärter and the Local Transport Study Group are partners.

It is no coincidence that trials have been held in West Berlin. Fuel supplies to the divided city of two million people, an island in the middle of East Berlin, have always been costly and, to

There has always been an incentive to save fuel. One idea was to use flywheels high-pressure storage units to recycle braking energy for restarting vehicles.

This was too expensive. Conversion cost roughly DM50,000, a lot compared with the DM350,000 purchase price of a bus. The economies in this case would have been towards the end of the vehicle's life. When the twin-engined bus unveiled at the end of last year, it was

WAR IN

friends, is available from:

Kleiststraße 15

economically much more promising.

The twin-engine concept is based on the fact that the full power of a conventional bus engine is only needed to start. the vehicle. Once it is moving a much smaller engine is sufficient. As a result the larger engine does not run at all economically for much of the time.

If the bus were to be powered by a smaller engine once it was on the move. this smaller engine could run at peak efficiency and economy.

Initial experiments have been with twin 77-kilowatt engines instead of a single 147-kilowatt engine.

A clearer idea of the saving is indicated by the size of engine needed to generate this power. The twin engines are 2.4 litres each, the conventional engine s an 11-litre diesel.

The twins are fitted out with electronic transmission and automatic clutch units. They drive a single shaft connected to the rear axle differential.

The two engines run with one almostconstantly in operation and the other only in use to give peak power, being switched on when more than a certain amount of power is required - to accelerate, for instance,

Once a cruising speed has been reached the second engine is cut off. When the bus brakes hard, when turning into a parking bay, for instance, the first engine is cut off too. The bus then

awarded the city's innovation prize. It is "freewheels" into the stop to drop and

The driver has nothing to do with the controls that regulate all these operations, Automatic transmission has long been a standard feature of conventional buses. Here too the driver simply has to

As gear changes are staggered during acceleration the pressure on clutch linings is reduced too.

Trials have shown the twin-engined buses to handle more satisfactorily, with drivers soon growing used to "freewheeling" when the engine is cut off. This is literally what happens. The

engine is switched off and doesn't just idle. It switches back on automatically in less than a second when required.

Trials have borne out computer estinates of fuel savings of between 16 and 20 per cent.

The oil and coolant cycles of the auxiliary engine are maintained at the right emperature even when the engine is out of action; this is essential to ensure long

Two extra power units have been added to make sure the power-assisted steering remains fully operational at slow speeds. One runs at speeds of below 10kph, the other when the engine is virtually idling or switched off.

Since the engine virtually no longer serves as an auxiliary brake an electric retarder has been added to make the bus brake in much the same way as conventional vehicles and, of course, to ease pressure on the wheel brakes.

Yet despite these extras and the twin transmission units and their various electronic controls the twin-engined bus weighs less than standard vehicles.

Weight can be undercut by an estimated 200kg by transferring transmission to the differential.

Stranger still, the twin-engine concept cuts running and maintenance costs even though the larger engine runs twice as long as the smaller (400,000km, or about five years).

That is because the larger engine needs a complete overhaul after about 200,000km. It also costs about DM45,000 new, whereas the smaller unit complete with gearbox costs a mere DM9.000.

The project is being subsidised by both the Federal Research and Technology Ministry and the city's Senator of Science and Research.

## Thinking ahead and avoiding accidents

SAFETY

#### Süddeutsche Zeitung

Deople behave in widely differing ways in an emergency. This is when accidents are likely to happen. Their behaviour is governed by basic senso-motoric processes - sense impressions that trigger movements.

The work done by Dietrich Ungerer and his staff at Bremen University's senso-motoric research laboratory includes identifying risk factors, probing accident causes and devising precautionary measures.

Whether the basic senso-motoric processes run smoothly will depend on the information capacity and information reserves at a person's disposal in a risk situation.

Addressing the 11th international cybernetics congress in Namur, Belgium, Ingerer dealt with the fundamental connection between stress and accidents.

These basic processes were, he said, influenced by disturbances in and the speed of human information processing, by tiredness, by rapid environmental changes, by unusual demands and by difficulties in speech communication.

People in risk situations had to check what was going on and what they heard and saw. They must then guess what was likely to happen next.

The first problem to be borne in mind was, he said, man's limited information ca-

The ability of a pilot, a motorist or a person in an everyday risk situation to avoid making a mistake depended on how many events he could register and process. The more tired he was, the greater the

stress and the poorer his training, the likelier his information processing capacity was to undergo an upset or breakdown. Speech communication was a special problem in emergency and risk situations.

Speech," Ungerer said, "can upset information processing to such an extent that behaviour is more risk-prone." Yet understanding others could be extremely important - communication

between crew members in an airliner's cockpit or between cockpit and airport control tower, for instance. The way in which instructions were given could make it much easier for the

pilot to handle a situation. So the Bremen accident research scientists have devised a "preventive" mode of speech It is intended for use in training and

in learning how to behave in a manner conductive to safety. Preventive forethought by motorists

is another problem the Bremen research users can be found guilty of an offence in Germany if they are proved not to have articipated an accident. Drivers must thus bear in mind what

might happen and drive accordingly. Experiments in the Bremen senso-motoric laboratory are aimed at determining factors that limit forethought.

The research team then plans to devise methods of boosting the ability to think ahead. (Silddeutsche Zeitung.

Munich, 3 November 1986)

#### SOCIETY

# New Jewish centre reflects new mood

About 30,000 Jews live in West Germany. Forty per cent were born after the war. Frankfurt has a Jewish population of about 5,500, not quite as many as Berlin, which has the biggest Jewish community in the country. A mark of Jewish self-confidence in Germany is a Jewish centre which has been opened in Frankfurt.

Many younger Jews are challenging the lack of assertiveness of their elders. They want to know why they should be so reticent about their Jewishness.

This emerging self-confidence is reflected in the Jewish Community Centre building in Frankfurt which contains a kindergarten, a primary school and religious, cultural, sports and entertain-

The building looks just like any other, but it has special security arrangements! bullet-proof windows; for example.

Security accounted for a tenth of the DM32m spent on the land and building

A member of the community's executive committee said the alternative would have been to have built a high wall around the centre. "No one wanted that," he said.

So other steps have been taken. Every hour a police car drives past. When children have finished school or kindergarten, they are all driven away together.

Threats are constantly being made, mostly anonymous but, recently, callers have been identifying organisations they represent.

The community executive calmly said: "Just think of Istanbul or Vienna. Left-wing terrorists, right-wing terrorists, terrorists from the Middle East. The Jewish centre could be a target for any of these groups."

Older people among the community will never get rid of their anxieties, but the self-confidence of the young Jews in Frankfurt is more recognisable in Frankfurt than any other German city.

They are German citizens who acknowledge the state and the demands it makes of them, but they want to protect and underline their distinctive qualities.

German public opinion was made aware of this in the demonstrations against the Rainer Werner Fassbinder play, Die Stadt, der Müll und der Tod, staged in Frankfurt in November 1985.

The new Jewish Centre that has been under construction for a long time and has only recently gone into use, has created a new, odd even, situation. It is a development that many Jews, particularly in Frankfurt, are scared about,

The building includes a fair amount of symbolism; cracked tablets on which the Ten Commandments are written. the menorah and the Star of David. It reflects the varied life of a group about which most of its fellow citizens know, little.

There is the Jewish primary school, it was established 20 years ago and has places for 120 children in a preparatory class and eight classes over four grades.

The school was previously located elsewhere. It has such a good reputation that many non-lewish parents have their children educated at the school, although it costs DM350 per month (for members of the Jewish Community the fee is DM250). A quarter of the child-

teaching staff are not Jewish. The school curriculum is the same as any other school with two exceptions: classes in Hebrew (as a foreign languago) and the Jewish religion are held. 🚹 About a half of the ... non-Jewish children voluntarily take part in the Jewish religion instruction. There is no question of religious conversion, however. A

missionary urge is

foreign to the Jew-

ish faith, but it is hoped that the young people taught at the school will one day be ambassadors for a better un-

derstanding of Jews and Jewry. Next year two more school grades will be added to the school's programme.

There is a demand for 5th and 6th grades in the school where pupils will be promoted according to their individual

The kindergarten for 70 small children has also been brought into the centre. It would not be easy to find another kindergarten in this country whose routine is so deeply embedded in adult life, whether it is the parents of the toddlers, relations or strangers.

This seems to be more important than the small classes in the kindergarten, the excellent equipment available and the high standards of the teaching staff.

The centre includes a hall seating 600 that can be used as a theatre, concert hall or for birthdays, weddings and other festive occasions.

There are also group and handicraft rooms and a special room with a wall

bar for the centre's much-praised dance

In addition the centre has a splendid sports hall, particularly for the Jewish gymnastics and track-and-field association, Makkabi, that takes part in the Frankfurt local football league.

The centre has a council chamber for the Jewish Community parliament, elected every three years.

Last of all there is a windowless disco for the 250 young Jewish people in

One would like to regard it as all very impressive, but Jews standing in front of the centre do in fact hear passers-by comment: "Look at that, international Jewry is back,"

Comments such as these show traces of the old prejudice that assumes all Jews are rich businessmen.

A few Frankfurtistatistics throw some

light on this, Seventy per cent of the church tax collected by the city from the Jewish Community comes out of income tax this is the same for the church tax collected by the state from Christians.

Not hiding behind a wall: the Jewish centre in Frankfurt.

There are between 300 and 400 Jews in Frankfurt who collect social benefits, a Jewish social service that covers for example meals on wheels, out-patients and care for the aged.

There are rich people and poor people among them, and many, many children. The Jewish birth rate is higher than the German rate, but the social struc-

ture is similar. There is perhaps one difference. Jews in a German city stick together more than do others. Many features in the new centre have been paid for by donations. Subscriptions paid for the DM120,000 menorah in the hall.

The restaurant, open from 11 in the morning until 11 at night, serves kosher food and is a kind of thank-you to the city for its assistance.

This kosher restaurant is an important feature for many Jews from all over the world who come to Frankfurt for various fairs and exhibitions.

The young deputy chairman of the Jewish Community, Michel Friedmann, listed three functions the new centre serves: It provides information to non-Jews

and young Jews. He said: "The Jewish" child who knows nothing about his national heritage is irritated twice as much when he or she is teased or the subject of hostility."

It is a place where Jews can enjoy their own way of life. Friedmann again: Here you can be Jewish, speak Yiddish, cat kosher food and listen to Jewish music - or equally do something i years. Authors include Jacob Wasser else if you want to."

It is also a refuge. Friedmann said: . and Michael Beer. Unfortunately many of us need this. Different casts will be used and in The small government official who gets all the actors will be Jewish. Lampen rom unknown colleagues a little slip of will accompany some more obscure paper with the latest gassing joke or 'productions with explanations about choolboys and girls who are with small " features of Jewish culture. but effective neo-Nazi cliques - they Lampert studied drama in Bast Ger need to get away to somewhere where many and worked as a director in the

It goes without saying that the proud, new self-assured Jewish Community building will eventually attract latent, muffled anti-semitism, anti-semitism that is: certainly not confined to West Germany.

But these people, mainly young people, will know how to take this in their stride. They have to learn not to be so touchy and get worked up as young Germans expect; them to do: They have ... under the chairmanship of Professor o understand that some Germans have ... Alphons Silbermann, The state clly pecome insensitive. Friedmann, who is a banks and individuals supported in Continued on page 15

sponsibility.

**TELEVISION** 

This means that television does not do justice to its responsibilities and that the medium places increasing priority on the crucial role it has in influencing social trends.

Politicans are given the opportunity to present their views just as they will, raining viewers to passivity, instead of being on the look-out for new ways of presenting to viewers background infornation and some idea of how affairs are interrelated.

In his lecture Axel Corti, an editor from Vienna, gave a true picture of viewers who are increasingly having dificulty in coping with reality.

Violence produces a hunger for more violence, he said, "When pornography began to be tedious, this did not set off a 'so what' effect among the public, as expected. Rather specialists arrived on the scene and violence was introduced to give new kicks. Things developed from

of West German living rooms. A viewer Corti believes that the same happened to television. People have bemight get up from the television to get a drink and return to find an actor or actcome slaves to fabrications.

> He said: "No-one would publicly admit that he or she wanted to see children being tortured, murder and rape." However that is more and more expected from television.

Warnings that television violence will be emulated are dismissed by reference to the brutality in classic fairytales: Corsaid: "Children have rarely thrown anyone into an oven."

Television journalist Heinz Werner Hübner from Cologne, speaking at the end, warned that concentration on the viewing figures had led to a slackening appetite for violence. Responsibility is of the reins. This would eventually lead not diminished by saying that the worldto all programmes being equally bad.

For a long time now television has gone over the brink. The American situation now prevails in early evening programme planning. For a long time children have been given a taste of murder and homicide.

He said that the answer was not censorship. Having no blinkers meant being on the alert against film violence and too much talk on the news about the ing forest filmed against a dark night sky world being less than perfect.

It is no argument to say that viewers who repeatedly watch violence get a dis-

# Festival hopes to discover unknown female talent

#### KielerNachrichten

When the Women's Film Festival began in 1984, the intention was simple: to show films and videos made 

Biddy Pastor, one of the initiators, says it was not the aim to show films allegedly made for female consumption. Discovering the small-time and the unknown was the intention.

 The first festival had a budget of only DM10,000 and had only eight fledgling film-makers. But it was immediately obvious that there was a demand for such

This year, the third festival was staged in Cologne with a budget of about DM80,000. Cash came from many sources.

There were films from Austria and Switzerland as well as West Germany. Next year it is hoped that films from France, the Benelux countries, Britain and East Germany will be included.

This all depends on whether the cash can be raised! Cologne, a city of the media, should not have to be asked

The "Feminale" as the festival is ironically called, echoing the Berlinale and Biennale, was from the very beginning media-oriented. The festival of films and videos from

independent women directors also included exhibitions, lectures and work-The films and videos shown covered the whole range from short experi-

mental films to full-length documenta-At the opening, Biddy Pastor said that the accent this year had been changed from a "contemplation of the

naval" to wider issues. This widening of horizons was evident this year in various films, obviously in the main in the longer productions.

The Austrian contribution Kuchengespräche mit Rebellinnen; made by Karin Berger Elisabeth Holzinger, Charlotte Podgornik and Lisbeth N. Trallori, highlighted the historical

.. The camera work in this documentary was unsatisfactorily simple. It told the story of four women in the Austrian resistance, describing their unending courage.

Susanne Zanke also dealt with the resistance movement in Austria in her Eine Minute Dunkel macht uns night

This film tells the story of the architect Margarete Schütte-Lihotzky who in prison came in contact with a new solidarity among women. Other films gave an insight into other countries. Jeder Tag Geschichte by Gabrielle Baur and Kristina Konrad is a convincing documentary about daily life in Nicaragua, showing the advances made by the revolution and the difficulties it has encountered.

Cornelia Schlede in her Dar El Nacim - Slum zum Paradies portays the lives ingly true to detail. ment aid project in Port Sudan. This film is a cautious and frank approach to the circumstances governing the lives of (Hannoversche Aligemeine, 8 November 1986) Others.

While in the main the documentary and traditional forms of narration prevailed, some of the short films included in the programme showed an inclination, along with the pluck, to dabble in new forms; films with dream characters and experiments with sound and cutt-

This year's Feminale was also the occasion for a meeting of the women filmmakers association. The association is considering making a complain about the constitutionality of the new film omotion legislation enacted by the Bonn government, since demands that there should be an equal representation of women on committees remain disregarded.

The consequences of such legal action, should it be disputed, would be a never-ending conflict about equal rights in the film industry

Half ironically it was said at Feminale: "We shall achieve real equal opportunities if mediocre women have management positions."

Danielle Krüger (Kieler Nachrichten, 24 October 1986)

first production. Bensheim will be the home base for the touring theatre company that will be signed up to perform in other theatres.

A lot was expected from the first performance from critics, culture experts and emigrants from abroad.

These expectations could not hope to be filled because of personnel difficulties and a small budget of only DM16,000. The theme of the play was also difficult to handle.

Like its author, who lives in France, Der Puppenspieler von Lodz is a survivor from persecution. The puppeeter remains marked by his horrific experiences in concentration camps.

He escapes from a concentration camp and locks himself up, symbolically, in an attic because he did not believe the war would end.

His marionette theatre, in which his wife is personified, is his fantasy world to which he surrenders his fate and

A former comrade in suffering could rescue him, get him abroad. Germany cannot be trusted.

Lampert's production has a few breath-taking scenes with some mishievous comic elements The marionettes bring in a sense of

sadness. One of the most impressive characters in the play was the dumb suppet Anna Kaiser rather than the main actor Michael Gabel.

He is the nice young man from nextdoor, certainly not a person marked out by destiny.

Allowances must be made for the short time available for rehearsal.

Lampert's professional production and sculing were unnecessarily given an amateur air. The attic was disquieten-

The second production is already in rehearsal, a play by Max Zweig on South American ethics and morals.

#### THE ENVIRONMENT

# Rhine ecosystem damage is 'devastating'

#### Süddeutsche Zeit und

hemical pollution of the Rhine downstream from Basle after a fire at Sandoz, the Swiss chemical company. has caused mass death of micro-organisms in the river.

Tests of water samples taken as far downstream as Mainz and Wiesbaden are said by the Environment Ministries of the Rhineland-Palatinate and I-lesse to have revealed the death of small river creatures on which fish feed.

They include river crabs, water fleas, lice, beetles and larvae. "Devastating" was the verdict of Marlene Mühe, spokeswoman for the Rhineland-Palatine Ministry.

Environment Minister Klaus Töpfer says there is a danger of long-term damage to the Rhine's eco-system - even though fish might not have died in the Rhineland-Palatinate as they did further upstream in Baden-Württemberg.

Rhenish waterworks that filter water from the river have been warned and have taken precautions, so drinking wa-

ter supplies are unlikely to be affected. Herr. Töpfer said laboratory analysis of the flesh of dead cels washed ashore had shown a disulfoton count of 0.77 milligrams per kilogram, as opposed to a normal level of 0.01 milligrams.

He advised against fishing in the river at present, let alone cating fish caught in

Hesse Environment Minister Josehka Fischer plans to invite chemicals companies based in his state to confer with the authorities on the lessons to be learnt from this latest case of pollution and on precautions to be taken in respect of the firms' fertiliser depots.

These depots can, as shown in Basic, be "an incalculable ground water hazard," says Ministry spokeswoman

Water resources up to and including the food cycle are threatened, she says.

The wave of pollution between 70 and 80km (50 miles) long heading downstream from the Swiss border reached North Rhine-Westphalia on 7

A spokesman for the Environment Ministry in Düsseldorf said dead fish had not yet been reported and he was not sure whether they would be.

The business manager of the Rhenish waterworks association, Klaus Lindner, said heavy pollution, especially ester phosphate, had been reported.

All waterworks had stopped using water filtered from the Rhine.

The Cologne EPA advised against letting children and dogs play on the banks of the river for a few days. Water sports enthusiasts would do well to take it easy for a while too. Dead fish washed ashore should not be touched.

The Bonn Federal government accused the Swiss authorities of delay in notifying it of the pollution.

Bonn government spokesman Friedhelm Ost told journalists in the German capital that Switzerland had not raised the international alarm agreed in such

He was reported as saying German firms were also to be required to review the precautions envisaged in emergen-

The Swiss government was expected to submit in about a week the report requested on the causes, course and effect of the fire and the pollution of the Rhine. A copy would also be submitted to

the French authorities. The Social Democratic parliamentary party called a special session of the Bundestag environmental affairs committee.

Volker Hauff, deputy SPD leader in the Bonn Bundestag, accused the government of withholding information.

He said the Environment and Transport Ministers had "gone into hiding." The Rhine was known to be partially dead already. There could be no alternative to making precautions mandatory in the chemical industry.

About 20 waterworks between Basic n Switzerland and Emmerich on the Dutch border are reported to be considering damages claims against Sandoz.

Bonn municipal official Reiner Schreiber said damages in the Federal capital would amount to tens of thou-

The Rhenish waterworks association was also considering jointly suing Sandoz. The fish trade might well follow suit, cel breeders having invested heavi-

The Swiss Foreign Ministry has presented an initial report on the repercussions of the Sandoz fire to the embassies of France, Germany and Holland in Berne.

Ministry spokesman Clemens Birrer said the report outlined the latest information available to the Swiss authorit-

# East Bloc begins to act as pollution plays havoc

unar landscapes of dead forests and ∠lifeless rivers and lakes are typical of Eastern Europe's environmental problems, according to a report published by the Friedrich Ebert Founda-

So is drinking water so polluted that it can no longer even be put to industrial use. So are entire villages that have had to be abandoned on health grounds.

Shocking examples are listed that disprove the claim, made for years in the Soviet Union and East Germany, that only capitalism is incapable of solving environmental problems.

It clearly makes no difference to flora and fauna whether they are the victims of capitalist profit orientation or communist plan fulfilment. The situation would appear from the

report to be worst in Poland and Czechoslovakia The Polish Academy of Sciences estimates annual environmental damage to amount to 500 billion zloty, or roughly 10 per cent of Poland's gross domestic

The Upper Silesian industrial area, which includes the Nowa Huta and Katowice steelworks, is reputed to be the most seriously polluted zone in Europe.

All Upper Silesia is said to be covered in industrial dust. The number of retarded schoolchildren has increased at such a rate that eating fruit and vegetables grown in miners' allotments has had to be prohibited.

Samples have been found to contained 220 times the amount of cadmium, 165 times the amount of zine and 135 times the amount of lead permitted.

Several villages have had to be abandoned in the Lublin copper area. Eighty per cent of sewage is still pumped untreated into rivers and lakes.

Some Upper Silesian rivers and lakes are already as salty as the Baltic where, n Danzig Bay, the water is largely toxic. Similar reports are received from Czechoslovakia, a country poor in water resources where entire categories of flora and fauna are threatened with ex-

In Bohemia about 400,000 hectares of woodland have been totally destroyed. In the Erzgebirge hills scarcely a single tree survives at altitudes higher than 900 metres (2,950ft).

Supplies of safe drinking water can no longer be guaranteed. In Prague babies under the age of one are not even allowed to drink boiled tap water.

Yet the city's drinking water has long ceased to be taken from the Molday, which is far too heavily polluted to safety's sake. Water is pumped from the Zelivka, 80km (50 miles) away.

In East Germany only 17 per cent of main waterways can still be used as sources of drinking water. East Germany, included in Eastern Europe for the purposes of the report, suffers mainly from brown coal combustion and inadequate purification of industrial effly ent and domestic sewage:

The Friedrich Ebert Foundation which is closely associated with the Social Democratic Party, reports increasing environmental awareness in all Eastern European countries but Rumania:

Environmental campaigners in Rumania can still expect to be tried on criminal charges. Since 1984 President Ceausescu has combated the effect of pollution on historic monuments by wholesale demolition

Growing awareness of environments issues among Soviet party and government officials has been noted in the USSR, especially since Mr Gorbachov assumed power.

Public discussion of environmental issues is growing increasingly frank and outspoken in the Soviet Union.

Soviet leaders say 7,000 filtration w its have been installed over the past if years to reduce static emission, while pollution in effluent form has been reduced by a third.

East Germany is claimed in the survey to be a country genuinely prepared actively prevent further environmental destruction by both domestic measures and international activity. Since last year a growing number of

East German scientists have criticised self-satisfaction and called for higher investment in environmental protection. Church groups are said to have play-

ed a leading role in promoting this growth in environmental awareness.

Poland and Czechoslovakia are no longer ignoring environmental problems or disregarding them in media coverage, but measures so far undertaken are said to be unlikely to be enough to remedy the damage already done ...

Bids to rescue the Erzgebirge by planting pollution-resistant varieties of birch and poplar seem more of a despairing gesture than a serious attempt to provide effective environmental pro-· Gerd Rauhaus tection.

## Warning against dieting purely to look better

The more Germans go on diets, the fatter they grow, says Göttingen nutritionist Volker Pudel, who plans to prove his point in a three-year research project.

The Federal Research Ministry has approved a DM400,000 grant toward cost of the project.

Laboratory experiments are to check whether the diets many German women try out from time to time are not the cause of serious weight problems and upsets in eating habits.

Professor Pudel, who heads the nutritional psychology research unit at Göttingen University, says nearly all diets increasingly fail in the long term.

Blitz or crash diets in particular do serious medium-term damage.

The body adapts in a fairly short time to the lower food intake, he says. It starts saving energy and in some cases makes do with 50 per cent of its previous energy requirement.

Once a crash diet has been abandoned this energy-saving reaction leads to a substantial, weight gain despite a normal calorie intake.

That, Professor Pudel says, is the beginning of a vicious circle for many peole keen to lose weight. He advises against slimming for purely cosmetic

#### **Immune-system suppressant** in diabetes research

yolosporin A, a drug administered Kolb from Düsseldorf. Diabetes expert after organ transplants to suppress immune response and prevent rejection of the transplanted organ by the body, has been used against diabetes.

Promising initial results have been achieved with newly registered diabetles requiring insulinitreatment:

... Cyclosporin A has helped them to maintain their output of the vital hormone - insulin - and to generally improve their metabolism.

. It will be three to five years before we know whether the drug can be generally used to treat diabetics, says Dr Hubert

Professor Kolb told a Karlsruhe therapy congress Cyclosporin A must regulate the patient's insulin production to ensure that the output is just enough.

He assumed the drug must prevent the destruction of insulin-producing beta cells in the pancreas or at least lead to regeneration of damaged beta cells. Diabetes is caused among young

people by an immune inflammation of the pancreas in which beta cells are destroyed.

Uwe Secler scored 42 goals in 72 internationals between 1954 and 1960 for the

West German soccer team. For the last few years, he was the captain. The solidly

built centre-forward, in the days before they became strikers, always led from the

front and the call from the terraces of "Uwe! Uwe!" soon became a battlecry that

was taken up far beyond his native Hamburg. Seeler was a great header of the ball

and scored a lot of his goals that way. One observer recalls a typical goal for Ham-

burg in a Bundesliga match: "HSV (Hamburg) took a corner. Uwe was on the far-

side of the penalty area. He jumped for the ball and, as he headed it, screwed it with

a sharp, sideways motion. The ball appeared to take off on a tangent away from the

net. The opposing goalkeeper certainly thought so, and made no great attempt to

follow it. But suddenly the applied screw took effect, and the ball began to curve. It

went in." Seeler played for no other club. He is a Hamburger through and through,

with one of those accents that speech imitators like to get their tongue around. He

is one of those sportsman who has retained the popularity of his playing days. This

week he turned 50. He was given a reception at the town hall, a television company

put on a gala evening to mark the occasion and Hamburg port officials elected him

#### FRONTIERS

# Steel firm denies maltreating foreign workers: story 'a fantasy', court told

Günter Wallraff is an investigative the suspicion that the book was written in a hurry, helped by unnamed co-authors should be offered the Order of the Fedhim a hero or a villain, depending on the

His method has been to get hired by companies posing as a worker and collect evidence, sometimes using aids like hid-

He has reported in this way on several cases including a newspaper's news gathering habits and an insurance company's methods.

His latest effort is a book called Ganz Union (At the Very Bottom) which reports on how Germany's biggest steelmaker, Thyssen Stahl, treated some Turkish workers.

. The book has been a runaway bestseller with nearly two and a half million copies sold so far and translations into 18 languages either completed or

Some of Wallraff's descriptions are graphic: "in no time it (the dust) is so thick that you can't see your hand in front of your eyes. You don't breathe the dust in any more, you swallow it and eat it. It chokes you. Every breath is torture. Three hours. That means breathing in 3,000 times. Which means pumping the lungs full of coke dust . . . in between you try and get your breath back, but there is no escape because you have to work,"

Now, more tha a year after publication, the steelmaker is hitting back. It is suing. It says Ganz Unten is a fantasy. It wants a court in Düsseldorf to hali further publication and distribution.

In another passage, Wallraff, who does have witnesses to back his charges, tells how workers at the steel plant were required to keep on working despite emergency sirens and red lights indicating danger and that workers should leave the area.

An illuminated notice warned that during a particular process, oxygen might escape and that this could lead to an explosion. But the workers had to keep on

He alleged that a Thyssen man had told a Turkish worker who became frightened and wanted to leave the area that if he did, it would be taken as a refusal to work and he would be dismissed.

Thyssen Stahl claim that Wallraff's descriptions are based on a jumble of assertions and a misunderstanding of the warning system.

- For these statements and a whole series of others Thyssen Stahl are seeking the injunction against Wallraff after a month of haggling about the formation of an independent committee of inquiry ended inconclusively. . .

Both sides complained that the candidates proposed by the opposing side, maintaining they were either not competent enough or biased.

Thyssen Stahl want to damage Wallraff's reputation as a serious investigative journalist. However, Wallraff himself stresses that he has so far defended his book in five court actions and not been

But he has "voluntarily," as his Cologne publishers Kiepenheuer & Witch put its made alterations to two chapters, alterations that did not concern Thyssen Stahl.

He made these alterations because he had taken material from other sources, without acknowledging that he was quoting from someone else.

These embarrassing borrowings raise

and written without too much concern

No matter what happens the Düsseldorf court action cannot influence the political effects of the book:

No other book since the end of the war has been the subject of so much public discussion about the scandalous state of affairs in industry. Ganz Unten will undoubtedly have wide-ranging consequences in the working world: ...

Wallraff, disguised as as a Turkish worker, named Ali, armed with a tape-recorder and a concealed video-camera, showed how badly Turkish guest workers in the Federal Republic are treated. . .

He also threw light on the gangs of modern slave-traders who operate as lahour subcontractors. They sign up; the guest workers literally on the street and send them off in running shoes and T-shirts, often without social benefit coverage and at rock-bettom pay into West German factories.

There they are given the most dangerous and the filthiest jobs that no German

No-one is now concerned whether Wallraff is accurate in detail! What is accepted is that overall he was right...

Wallraff himself has described the public effect of his book. He said: "It has created a stir. People who preached xenophobia are not so sure of themselves any more. Many Turks have told me that Germans now try to talk to them and in-

He is right. Since Ganz Unien was published on 22 October last year it has sold 2.25 million copies, breaking all previous records in German publishing. It has been

translated into 18 languages, a phenomenon that still puzzles the experts.

Wallraff has attracted a readership far beyond left-wing intellectuals, primarily among workers who usually never read a

Since the book appeared everyone is talking about it. Schools study it in class and Wallraff goes from one public read-

A Bonn boutique owner was so moved by the fate of the Turks, who have until now stood in the shadows and never been noticed, that she has taken on a young Turkish girl, despite the fact that some of her customers have turned up their noses

Taxi drivers in Duisburg, where Thyssen Stahl is located, have asked the company for a brief about the situation, because, they claim, their foreigner fares continuously ask them about conditions

in the factory. The book has also stimulated considerable discussion among trades unions; They are now turning to the problem of their foreign worker colleagues far more than they have done in the past.

Before publication of the book a senior engineering and metalworkers union official, IG Metall, regarded as unreasonable the request to make a trip from Frankfurt to Cologne to look at the Wall-

raff material. Since the book's success the same offi-

eral Republic to make up for his previous lack of support. Wallraff declined: . . !

. The book has made the most significant changes in the working world. Employment Minister Hermann Heinemann (SPD) in North Rhine-Westphalia, for instance, has spoken of the "Japanisation" of the German labour market. This has become the subject of extensive discussion in political circles.

The book has also highlighted reductions in the permanent workforce in factories and the meteoric growth in the number of employment agencies that fill vacancies with cheap labour. ...

It is estimated that there are 1,600 firms of this type currently operating. . . .

The conditions that Wallraff described will be more meroilessly prosecuted than before, but In the meantime conditions in many firms have improved:

First of all at Thyssen Stahl. Despite the court action Thyssen Stahl has admitted that: the book has in some areas brought about changes.

 Thyssen Stahl spokesman Lutz Dreesbach said: "Naturally Wallraff has had an effect on us. Before the book was published we were having talks with factory safety officials, but since the book's appearance things have been speeded up so that conclusions can be reached."

Minister Heinemann has got agreement in writing from Thyssen Stahl, Mannesmann and the iron and steel industry employers association that a sharper supervision is to be given on work conditions for workers recruited from labour subcontractors, ensuring that there is proper maintenance of industrial health and safety standards, that proper hours are worked and that social security benefits are provided in accordance with regulations.

Thyssen Stahl has laid down that there will be no difference in safety standards offered their own employees and workers employed by subcontractors.

A spokesman for Minister Heinemann, Manfred Oettler, said: "If it had not been for Wallraff's book we would never have been able to come to an agreement with Thyssen Stahl."

Since December 1985 Thyssen Stahl have given 668 verbal and 17 written warnings to subcontractors. In 174 cases involving subcontractors production was called off because of grave infringements of safety regulations. In nine cases subcontractors were sacked.

The number of temporary workers taken on has been throttled back from 1,300 per day to about 1,000.

inals will be installed at the works' gates... unlikely to get much of a hearing in Bona. so that working time can be controlled .... Wallraff is now working on new mater

exactly. rial for a sequel to his book.

Wallraff quoted an extreme case of His royalties for Ganz one worker who slaved away for 39 hours without a break.

The deputy chairman of the Thyssen Stahl workers council, Heinz Karnitzsch- in the old part of Duisburg. ka, is full of praise for Wallraff, despite a : Wallraff himself has moved with few minor details that do not stand up family to live near Amsterdam after when examined closely.

He said: "The book has, of course, helped us enormously to get things done. A few members of the workers councilhave become more understanding."

Karnitzschka admits that he was himself shaken when the book appeared. It was water to the book appeared. It was shocking to read the descriptions of hatred

If you've got a works, I've got spanner... Wallraff, (Photo: Syan Simon)

for foreigners and the shameless exploits tion of foreign workers. Wallraff held up a mirror for us to see how things were."

Twelve of Wallraff's former col leagues, when he was masquarading as Turk, have been given permanent jobs h Thyssen Stahl. Two foremen have got to appear before a Duisburg court.

Employment Minister Heinemann has ordered that rigorous controls should be applied to labour subcontractors. A special six-man team has been set up at the factory safety and health office in Duisburg, that has combed through the state step by step, aided by local officials of the spot.

The team's findings confirmed wha Wallraff described. The deputy head of the safety office in Duisburg. Hans-Egon Glomster, said: "We have established that in 60 per cent of cases there have been infringements of factory health and sales regulations."

According to Heinemann the team unearthed infringements in the factories of 28 major companies inspected.

In 311 cases there were grave infringements of the regulations governing hours worked, and in more than 100 cases there was inadequate health and safety protection.

One example: subcontractor workers were found on a factory roof, working next to a chimney emitting hydrochloric acid fumes, without any protection against inhaling the fumes.

Minister Heinemann said that there are about 2,000 cases sub judice against illegal firms that "rent out workers."

It is estimated that the social security office in: North Rhine-Westphalla is swindled of DM760m annually in contributions by their operations.

Frequently illegal labour subcontractors have contacts with drug trafficing counterfeiters, prostitution and gamble

Draft legislation by Heinemann for radical limitations and controls on labor subcontractors with drastic fines and pris-From the beginning of 1987 new term-, on sentences of up to a year for abuses, is

He was captain when West Germany was cleaned up another 100,000 dollars by beaten 2-3 by England in the final of the 1966 World Cup at Wembley, in London. beating a Spaniard, Sergio Casals 6-4, 6-3, 7-6 in two hours and 18 minutes in The difference between the sides was a disputed goal. England's third goal was

this inaugural Paris event. So far this year, Becker has collected 774,324 dollars, second only to Lendl's 977,537 dollars. It was Becker's sixth view. There is a famous photograph showgrand prix win this year and his ninth overall, and now he goes on as favourite. ing Seeler trudging from the field after the to the finals of the Masters tournament; in New York, where the eight best in the world fight it out at the beginning of with Hamburger Sport Verein, HSV, the next month.

There is another indoor tournament is likely to miss. In addition, it is reported that he has asked his handlers not to commit him for exhibition events in the meantime. He wants nothing to interfere with his aim of becoming the world's

Björn Borg said after the Paris tournament that Becker might become the number one player next year. The fivetime Wimbledon winner said that so far, Becker had handled everything brillithe Bundeswehr for their national service, although the children of people antly. He knew what he had to do: keep on doing what he had been doing.

. He certainly knew what he was doing against Casal in the Omnisport Palais He continued: "It would be a shame if in the end, these young people were before a packed house of 15,000, Casal, a 23-year-old Catalan, is a released and atylish player who at one stage last year. painfully disappointed and empittered. a 23-year-old Catalan, is a related and logichim Neander alylish player who at one stage last year (Did Well, Bonn, 4 November 1986) was 30th in ATP rankings. He had

one away. He scored more than 1,000 in top competition.

1954. In 1972 he bowed out in a farewell game between West Germany and a World XI in the Hamburg Volksparkstadion.

In between he was a centre-forward (before they were called strikers) of the highest quality: a fighter, a toiler. He never spared himself, It was always 90 minutes of nose to the grindstone. His motto was: "The ball has to go in the net. Doesn't mat-

Another fact that endeared him was his loyalty to Hamburg. Not many other toplevel professionals can have stayed all. their playing lives with the same club. But Seeler did. Before him, his father, Erwin, had also played for Hamburg.

Seeler, known as "der Dicke" because of his solid, squat build, was wanted by Spanish and Italian clubs in 1960 and 1961. He thought long and hard about it, but in the end decided to stay.

"I had to think for a week about the inter-Milan offer - a million marks for three years. But I never regretted staying in Hamburg. Keeping your feet firmly on the

way to the bank

No nerves, just points ... Boris

forced to qualify.

ground also has its rewards." He was always a businessman during his soccer career. He and his wife (they have three grown-up daughters) together run their sportswear business Uwe Seeler Moden. They are the local wholesalers for a major supplier. They employ a dozen employees, but Seeler plays the boss as little as he did

He always has to be at the front where the action is - at his desk or in the ware-

In his spare time, he plays with a celebrity team ("exactly as I used to, only slower") to raise money for muscular dystrophy treatment, and visits a prison on be-half of a rehabilitation organisation.

And he is a critical observer of the soccer seene. He doesn't begrudge the players the money they get these days, but says: They should work hard for it for 90 minutes on the field," When Seeler was playing, that sort of performance was a matter (Rheinische Post, Dusseldorf, 4 November 1986)

able to hammer the nail home. In the Boris keeps on next game, he pulled out his seventh acc to take the set in 38 minutes. Applause was restrained. The crowd winning, all the

was hoping for a win by the underdog, who had sensationally beaten John McEnroe in the quarter final and then Tim Mayotte, another American in the semi final. Becker's first big test had come in his

semifinal against Frenchman Henri Leconte, although he dropped a set in coming through 6-2 3-6 6-3. In the final, Becker did not allow Ca-

sal to put him out of stride in the second set. In the fifth game, he broke the Spaniard's service and took the set 6-3 with a superb backhand passing shot.

The third set was tense. Becker lost his service in the first game, the only time he lost it in the match. He broke back to make it 4-all and they went to the tie-break where Becker showed again that his nerves are among the best in the game. He served aces number 21; and 22, which brought him to matchball, He won the point; the tie-break, 7-3; the set, 7-6; and with it the match.

wins one after another were his greatest success next to his two Wimbledon ti-

"I didn't think I could do it. I was not surprised by Casal's performance, Anyone who beats both McEnroe and May-

otte must be able to play." Casal said: "In the third set Boris was ired. But so was I. The thought of being forced to play another two sets was just

too much for me." Alexander Hofmann/apa (Rheinische Post, Düsseldorf, 3 November 1986)
